

Zimbabwe Digital Investment & Economic Intelligence Platform

Concept Note v0.3

July 2026

Prepared by Afronovation

Within the Afronovation National Digital
Acceleration Program (NDAP)

Executive Snapshot

Question	Answer
What is proposed?	An Afronovation-owned SaaS platform configured for Zimbabwe to digitize investment projects, support investor engagement, and create a governed project intelligence layer.
What is the first visible use case?	Modernizing the ZIDA project catalogue into a searchable project registry with sector, pillar, SDG, ministry, financial, readiness, document, and approval workflow data.
What is the broader pathway?	Afronovation National Digital Acceleration Program (NDAP): a 365-day government modernization pathway that can expand from investment intelligence into public-service digitization, interoperability, e-payments/e-tax concepts, tourism, diaspora, secure documents, and AI-enabled institutional support.
What does Zimbabwe retain?	Authority over official data, national content, project information, policy materials, institutional approvals, and government decisions.
What does Afronovation retain?	Full ownership and control of the proprietary platform, reusable modules, architecture, design system, implementation methodology, AI-enabled components, and super-admin configuration.
What is the requested next step?	A focused discovery and MVP activation engagement to validate scope, governance, data, user roles, pilot projects, and the commercial pathway.

1. Executive Summary

Zimbabwe is entering a decisive implementation period under Vision 2030, the National Development Strategy 2, Smart Zimbabwe 2030, and the country's broader digital transformation agenda. Afronovation proposes to support the Government of Zimbabwe through a practical platform-first initiative that begins with investment visibility and can grow into broader government modernization.

The immediate opportunity is to transform Zimbabwe's existing investment project catalogue into a live, searchable, governed, investor-facing platform that improves project discovery, investor engagement, institutional coordination, development partner visibility, diaspora participation, and economic intelligence.

The platform would begin with the digitization and structuring of ZIDA's existing project portfolio, which already includes a national overview, priority sectors, project owners, locations, investment requirements, financial indicators, PPP models, SEZ opportunities, and project profiles across health, agriculture, ICT, manufacturing, mining, infrastructure, renewable energy, tourism, and financial services.

Afronovation's proposed value is not to replace ZIDA, ministries, agencies, or existing government systems. The value is to provide an Afronovation-owned SaaS infrastructure layer that strengthens Zimbabwe's investment promotion architecture while preserving Zimbabwean authority over official data, national content, institutional approvals, and government decisions.

This concept note also introduces the **Afronovation National Digital Acceleration Program (NDAP)**: a structured 365-day pathway for helping governments move from digital ambition to visible, governed, platform-enabled execution. For Zimbabwe, the Digital Investment & Economic Intelligence Platform can serve as the first visible layer of NDAP, with future expansion into selected digital government, interoperability, secure document, e-payment/e-tax, tourism, embassy, diaspora, and AI-enabled service workstreams.

Core message

Zimbabwe already has a strong investment project pipeline. Afronovation helps transform it into a governed digital investment intelligence platform that can support investors, ministries, development institutions, diaspora stakeholders, and public-sector transformation leaders.

2. Purpose and Strategic Rationale

The purpose of this concept note is to propose a practical digital transformation partnership between Afronovation and the Government of Zimbabwe, beginning with the modernization of Zimbabwe's investment guide and project catalogue into a governed digital platform.

The initiative is designed to support Zimbabwe in:

- improving investment visibility and investor engagement;
- modernizing digital government infrastructure and service delivery over time;
- strengthening institutional interoperability and information coordination;
- accelerating priority public-service digitization;
- enhancing economic competitiveness and investment readiness;
- creating scalable national digital infrastructure built around governance, data responsibility, and adoption;
- developing a broader national digital transformation agenda through a phased, measurable execution pathway.

The strategic logic is simple: Zimbabwe already has national priorities, investment projects, and institutional structures. Afronovation helps organize those assets into a governed, reusable, investor-facing SaaS platform that can produce visible value quickly and scale into broader modernization workstreams.

3. Zimbabwe's Opportunity and Execution Challenge

Zimbabwe has a clear national development ambition, an active investment promotion mandate, and a growing digital transformation agenda. The opportunity is not only to promote Zimbabwe's investment potential, but to organize it into a trusted digital system that improves visibility, investor confidence, institutional coordination, and implementation readiness.

The challenge is that investment information, project data, sector priorities, public-service workflows, and institutional responsibilities can remain fragmented across documents, websites, presentations, agencies, and manual processes. This can make it harder for investors, development partners, ministries, diaspora stakeholders, and corporate partners to quickly understand what is available, who is responsible, what is ready, and how to engage.

Afronovation's National Digital Acceleration Program is designed to address this execution gap. It provides a structured pathway to move from strategy and fragmented information toward governed digital platforms, investor-facing intelligence, institutional workflows, secure records, service enablement, and adoption-ready implementation.

Opportunity / Challenge	How NDAP Responds
Strong national development ambition	Converts strategic priorities into platform-enabled execution.
Existing investment project pipeline	Digitizes projects into searchable, governed, investor-facing records.
Need for investor confidence	Adds project templates, approval gates, SDG mapping, ministry mapping, and verified publishing controls.
Fragmented information channels	Creates a unified digital interface for investors, institutions, and partners.
Growing digital government agenda	Provides a pathway from investment intelligence to broader e-government modernization.
Need for institutional coordination	Maps projects to sectors, strategic pillars, ministries, agencies, and workflows.
Need for diaspora and partner engagement	Adds lead capture, investor registration, inquiry routing, and engagement workflows.
Need for long-term sustainability	Embeds governance, adoption, training, capacity transfer, and platform scalability.

4. Immediate Opportunity: From ZIDA Project Catalogue to Digital Platform

The ZIDA 2025 project portfolio provides a strong foundation for a digital investment platform. It includes sector overviews, project descriptions, location mapping, capital requirements, financial indicators, project scope, PPP structures, and investment requirements. This is already valuable content. The next step is to make it easier to search, update, compare, govern, and convert into investable engagement.

Afronovation proposes to convert this type of catalogue from a static format into a live platform where projects can be searched, filtered, updated, classified, compared, governed, and routed to the right institutional or project-owner contact.

The platform would allow investors and partners to explore projects by sector, strategic pillar, province or district, beneficiary ministry, project owner, capital required, financing type, readiness level, SDG alignment, expected impact, PPP/private investment model, and investment return indicators.

Platform logic

The investment guide becomes the entry point. The project registry becomes the intelligence layer. The approval workflow becomes the trust mechanism. Investor registration becomes the conversion pathway.

5. Afronovation Positioning

Afronovation is a U.S.-based strategic technology and digital transformation firm helping governments, institutions, businesses, and diaspora ecosystems convert complex digital priorities into secure, scalable, adoption-ready platforms and transformation programs.

Afronovation is not positioned as a generic IT vendor. It is a strategy-to-execution and platform partner designed to help institutions modernize with clarity, discipline, governance, security awareness, stakeholder alignment, and measurable adoption.

For Zimbabwe, Afronovation's role would be to help translate the country's investment, digital government, and institutional modernization priorities into a practical platform-first implementation model - beginning with investment intelligence and expanding over time through NDAP.

Afronovation combines advisory, technology, platform development, program governance, change enablement, and investment readiness to help stakeholders move from ambition to implementation.

6. Proposed SaaS Platform

The Zimbabwe Digital Investment & Economic Intelligence Platform would be configured as an Afronovation-owned SaaS platform for Zimbabwe's investment promotion and digital transformation priorities. It would be designed as a complementary digital intelligence layer, not a replacement for existing institutions or government systems.

MVP Module	Purpose
Country Overview	Presents Zimbabwe's national investment profile and macro context.
Strategic Pillars	Organizes projects by national development priorities.
Sector Pages	Groups opportunities by key sector and subsector.
Project Registry	Converts ZIDA projects into searchable investment opportunity

MVP Module	Purpose
	records.
SDG & Impact Mapping	Links each project to SDGs, development impact, and institutional investor relevance.
Ministry Mapping	Connects projects to beneficiary ministries, secondary ministries, agencies, and regulators.
Investment Map	Shows projects by province, district, and economic corridor.
Investor Journey Hub	Explains how to invest, submit interest, request meetings, and access documents.
Document Vault	Stores project briefs, feasibility summaries, investor packs, and supporting files.
Review & Approval Workflow	Ensures all projects follow the approved template, pass validation, and receive authorization before publication.
Admin Console	Allows authorized users to add, update, approve, and classify projects.
Investor Inquiry Workflow	Routes investor interest to ZIDA, the Embassy, ministries, agencies, or project owners.
Analytics Dashboard	Tracks project views, investor interest, inquiry trends, and sector demand.

7. Strategic Project Intelligence Model

Each investment project should be created as a structured digital record, not merely a page or brochure. This allows Zimbabwe to present opportunities through a financial, institutional, development, impact, and governance lens.

Category	Fields
Basic Project Data	Project title, project owner, location, province, district, project type, project status.
Sector Classification	Primary sector, secondary sector, subsector.
Strategic Alignment	Strategic pillar, NDS 2 alignment, Vision 2030 alignment.
SDG Mapping	One or more Sustainable Development Goals.
Government Ownership	Primary beneficiary ministry, secondary beneficiary ministry, implementing agency, regulator.
Investment Details	Capital required, financing type, ticket size, PPP/BOT/BLMT/equity/debt/grant structure.
Project Readiness	Concept, feasibility completed, EIA completed, shovel-ready, under development.
Financial Indicators	Projected revenue, IRR, NPV, ROI, payback period.
Development Impact	Jobs, export potential, local value addition, climate impact, regional impact.
Investor Engagement	Submit interest, request meeting, request documents, contact route.
Documents	Project brief, feasibility summary, EIA summary, investor pack, supporting documents.
Workflow and Governance	Status, reviewer notes, approval authority, visibility level, approved by, published by, last updated.

Proposed initial strategic pillars

- Investment Attraction & Private Sector Growth
- Industrialization & Value Addition
- Agriculture, Food Security & Agro-Processing
- Mining, Beneficiation & Resource Development
- Digital Economy & ICT Infrastructure
- Energy Security & Renewable Transition
- Infrastructure, Housing & Urban Development
- Tourism, Culture & Destination Development
- Health, Human Capital & Social Services
- Climate Resilience & Sustainable Development
- Diaspora, Trade & Global Partnerships
- Public Sector Modernization & Digital Government

8. Project Governance, Review and Publishing Control

To preserve the credibility, accuracy, and institutional alignment of the platform, all investment projects created within the platform should follow a standardized project submission, review, approval, and publishing workflow.

No project should be published directly without review and approval by authorized users. This governance gate is essential to prevent data drift, incomplete submissions, misclassification, duplication, financial inconsistencies, institutional misalignment, or publication of projects that have not been validated by the appropriate authority.

Each project should be created using a structured project template requiring completion of all mandatory fields before submission for review. Missing required fields should trigger validation messages. Reviewer notes should be captured whenever changes are requested. Approval and publication metadata should remain visible to authorized users.

Project State	Description
Draft	Project is being prepared and is not visible publicly.
Submitted for Review	Project creator has completed the required template and submitted the record for review.
Under Review	Authorized reviewer validates completeness, classification, institutional alignment, and supporting information.
Changes Requested	Reviewer returns the project for correction or additional information.
Approved	Project has been validated and cleared for publication.
Published	Project is visible on the platform according to its assigned visibility level.
Archived	Project is no longer active or has been removed from public visibility.

Afronovation, as platform owner and super admin, retains ultimate platform-level control over publishing rules, workflow configuration, taxonomy management, user entitlements, and system integrity. Government users may receive configured access and approval rights based on the agreed operating model.

9. Lead Capture, Registration and Investor Conversion

The platform should not function only as a public website. It should operate as an investment lead-capture and conversion system. Public visitors should be able to see enough information to understand Zimbabwe's opportunity landscape, while deeper project details and document access should encourage registration and qualification.

User State	Access Level
Public Visitor	Can view country overview, sector summaries, high-level project cards, and general opportunity summaries.
Registered Visitor	Can view expanded project summaries, SDG mapping, ministry alignment, and more detailed investment information.
Qualified Investor / Partner	Can request investor packs, feasibility summaries, project documents, meetings, and curated opportunities.
Institutional User	Can manage projects, update content, review inquiries, or contribute validation depending on role.
Afronovation Super Admin	Full platform control, configuration, user entitlements, publishing rules, taxonomy management, and analytics.

The contact page should include a reason-for-contact field to support routing and segmentation, including investment opportunity, project partnership, government or institutional inquiry, diaspora investment, development finance/DFI inquiry, technical partnership, tourism/destination inquiry, media/press, general question, and other.

10. Personas and Entitlement Design

A proper entitlement design is necessary because the platform serves multiple user groups with different levels of authority, access, and institutional responsibility. The MVP should visibly demonstrate this structure, even if full production role-based access control is implemented during a later phase.

Persona	Primary Role / Access Need
Public Visitor	Explore high-level opportunities and register interest.
Registered Investor	View expanded project details, save projects, submit investment interest, and request meetings.
Qualified Investor / Strategic Partner	Access approved deeper information, request investor packs, and engage with investment desk workflows.
Diaspora Investor	Discover diaspora-relevant opportunities and join a structured investment pipeline.
Project Owner	Submit updates, provide supporting documents, and respond to inquiries if authorized.
ZIDA / Investment Authority Admin	Create, classify, review, approve, publish, and manage investment projects and inquiries.
Beneficiary Ministry User	View and validate projects linked to their ministry, suggest updates, and contribute supporting documents.
Embassy Investment Desk User	Support investor and diaspora engagement, route inquiries, and

Persona	Primary Role / Access Need
Afronovation Platform Manager	track market-specific leads. Operate the platform, support users, maintain quality, and manage workflows.
Afronovation Super Admin	Control country settings, taxonomies, users, roles, entitlements, publishing rules, modules, and analytics.

11. Afronovation National Digital Acceleration Program

Afronovation's **National Digital Acceleration Program (NDAP)** is a structured government modernization pathway designed to help public institutions move from digital ambition to visible, governed, platform-enabled execution within a 365-day horizon.

NDAP is not a single product or one-size-fits-all solution. It is a modular implementation framework that combines strategic alignment, platform architecture, digital investment enablement, public-service modernization, interoperability planning, secure records, data intelligence, adoption support, and partnership readiness.

For Zimbabwe, NDAP can begin with the Zimbabwe Digital Investment & Economic Intelligence Platform as the first visible layer. From there, the same structured approach can expand into selected digital government, ministry workflow, interoperability, e-payment/e-tax, tourism, embassy, diaspora, secure document, and AI-enabled service workstreams based on government priorities.

NDAP positioning

Investment intelligence becomes the entry point. Government modernization becomes the pathway. Measurable execution becomes the partnership model.

12. NDAP Pillars and 365-Day Pathway

NDAP Pillar	Afronovation Focus	Zimbabwe Relevance
Strategic Alignment	National priorities, institutional mandate, roadmap, governance, success measures.	Aligns platform work with Vision 2030, NDS 2, Smart Zimbabwe 2030, and ZIDA priorities.
Digital Investment Enablement	Investment guide modernization, project registry, investor workflows, economic intelligence.	Immediate MVP and first visible platform layer.
Government Service Modernization	eGovernment roadmap, ministry workflows, digital forms, service portals, public-service redesign.	Supports future digitization of priority services.
Interoperability & Secure Data Exchange	API strategy, systems mapping, data exchange concepts, institutional workflow integration.	Supports long-term coordination across institutions.
Digital Payments & Revenue Enablement	ePayment and eTax conceptual frameworks, payment journey design, service-fee workflows.	Supports public revenue and service modernization planning.
Secure Documents & Institutional Records	Document vaults, official records, credential workflows, approval gates, controlled access.	Supports project documents, permits, investor packs, and government records.
Tourism, Embassy & Diaspora Systems	Destination platforms, embassy workflows, diaspora engagement, investment outreach.	Supports economic diplomacy, tourism visibility, and diaspora investment.
Data, AI & Decision Support	Dashboards, project intelligence, AI-assisted search, guided workflows, analytics.	Supports investor discovery, internal decision-making, and partner reporting.
Capacity Transfer & Adoption	Training, change management, communications, user readiness, local capability.	Ensures the platform is used, trusted, and sustained.
Partnership & Financing Readiness	Business case, stakeholder value, program narrative, funder-ready roadmap.	Helps present digital priorities to investors and development partners.

365-day pathway

Period	Focus	Indicative Outputs
Days 1-30	Assess & Align	Stakeholder map, priority use cases, platform scope, governance model, success measures.
Days 31-90	Build First Visible Layer	Investment platform MVP, project registry, investor workflow, admin controls, approval

Period	Focus	Indicative Outputs
Days 91-180	Expand Government Enablement	gate. Ministry workflows, project intelligence, document vault, analytics, investor lead management.
Days 181-270	Activate Priority Digital Services	Selected service portals, e-payment/e-tax concepts, tourism or diaspora modules, interoperability design.
Days 271-365	Institutionalize & Scale	Training, adoption support, operating model, partnership-readiness package, scale roadmap.

13. Afronovation Solutions and Services Relevant to Zimbabwe

Afronovation's solutions and services should be presented in the concept note as the capabilities that make the Zimbabwe platform and NDAP pathway executable. The table below keeps the offer specific, credible, and relevant to Zimbabwe.

Capability Area	What Afronovation Provides	Application to Zimbabwe
Digital Transformation & Institutional Modernization	Roadmaps, operating models, workflow redesign, business process reengineering, transformation governance.	Supports a national digital transformation agenda and public-sector modernization roadmap.
Program, Portfolio & Change Execution	PMO, Agile delivery, stakeholder alignment, readiness, communications, adoption support.	Helps ensure digital initiatives move from concept to implementation.
SaaS, Web, Mobile & Enterprise Platforms	SaaS platforms, portals, investor systems, citizen-facing interfaces, admin workflows.	Enables the Zimbabwe Digital Investment & Economic Intelligence Platform and future service portals.
Cloud, API & Systems Integration	Cloud-ready architecture, API strategy, secure interoperability, connected workflows.	Supports future government interoperability and system modernization.
Data Intelligence, Analytics & AI Enablement	Dashboards, data models, AI-assisted workflows, analytics, decision support.	Enables investment intelligence, project dashboards, SDG mapping, and guided investor discovery.
Government Digitalization & E-Government	Digital public services, ministry workflows, document systems, citizen portals, service design.	Supports e-government modernization, service portals, and administrative digitization.
Trade, Investment & Diaspora Intelligence	Investment visibility, diaspora engagement, investor readiness, economic intelligence platforms.	Supports ZIDA, Embassy investment desks, diaspora investors, chambers, and development partners.
Capacity Building & Workforce Enablement	Training, adoption support, leadership alignment, digital skills enablement, capability transfer.	Supports local ownership, institutional use, and sustainability.

14. Delivery Methodology and Why Afronovation

Afronovation applies a practical delivery methodology designed to reduce transformation risk and move initiatives from concept to implementation.

Step	Purpose
Assess	Understand current state, readiness, risks, data, stakeholders, and opportunities.
Align	Confirm mandate, stakeholder roles, governance model, success measures, and implementation priorities.
Architect	Translate priorities into operating models, platform design, data structures, workflows, and roadmap.
Build	Develop the platform, configure workflows, structure data, and implement the MVP or pilot.
Adopt	Support stakeholder readiness, training, communications, change adoption, and operational use.
Scale	Prepare the platform for institutionalization, expanded modules, partnership readiness, and long-term sustainability.

Why Afronovation

Strength	Relevance to Zimbabwe
Strategy-to-execution discipline	Connects vision, roadmaps, governance, delivery, and adoption so transformation does not stall between strategy and implementation.
Platform-first delivery model	Designs reusable, scalable, and modular platforms rather than one-off digital tools.
Public and private sector fluency	Understands government institutions, private-sector partners, investors, development actors, chambers, and diaspora organizations.
Built-in change and adoption	Embeds stakeholder alignment, communications, readiness, training, and adoption metrics into implementation.
Secure, scalable architecture	Frames solutions around security, integration, data responsibility, user experience, and long-term sustainability.
Partnership readiness	Helps translate digital priorities into credible, investment-ready programs by aligning vision, architecture, governance, execution planning, and stakeholder value.

15. Stakeholder Value

Stakeholder	Value Created
Government of Zimbabwe	Strengthens digital transformation execution, institutional coordination, and investment visibility.
ZIDA / Investment Promotion Authority	Converts project catalogues into a searchable, governed, investor-facing platform.
Ministries and Agencies	Connects projects to beneficiary ministries, sector priorities, SDGs, and implementation pathways.
Embassy of Zimbabwe	Provides a digital tool to support investor engagement, diaspora outreach, and economic diplomacy.
Development Institutions	Improves project classification, SDG mapping, readiness visibility, and institutional alignment.
Investors and Corporate Partners	Makes it easier to discover, compare, evaluate, and engage with credible investment opportunities.
Chambers of Commerce and Trade Groups	Supports market visibility, trade corridor engagement, and structured investor outreach.
Diaspora Institutions	Creates a pathway for diaspora investors, professionals, and partners to connect with national opportunities.
Public-Sector Transformation Leaders	Provides a first visible layer for broader digital government modernization and interoperability planning.

16. Potential Areas of Support: Afronovation as Strategic Implementation Partner

Afronovation may support the Government of Zimbabwe as a strategic implementation partner across a phased national digital transformation agenda. The initial engagement would begin with the investment platform, while future support may expand into broader digital government, interoperability, public service, tourism, diaspora, and AI-enabled service infrastructure.

Area	Afronovation Support
National Digital Acceleration Program	Structure a 365-day pathway from platform MVP to broader government modernization and measurable implementation.
National Digital Transformation Strategy	Support the development of a practical digital transformation agenda aligned with national and institutional priorities.
Investment Guide Modernization	Convert static investment materials into a live, searchable, investor-facing digital guide.
Digital Investment Enablement Platform	Deploy a SaaS platform for project discovery, sector intelligence, investor inquiry routing, and opportunity tracking.
Government Interoperability Framework	Provide conceptual and technical guidance for secure data exchange across institutions.
eGovernment Modernization Roadmap	Support prioritization of public services suitable for digitization.
ePayment and eTax Conceptual Frameworks	Develop high-level models for secure public payments, fees, permits, taxes, and service transactions.
Tourism and Destination Platforms	Support digital promotion of Zimbabwe's tourism assets, destinations, investment opportunities, and visitor-facing services.
Embassy and Diaspora Engagement Systems	Support tools for embassies, diaspora communities, investors, and

Area	Afronovation Support
AI-Enabled Public Sector Services	strategic partners to connect with national opportunities. Provide controlled AI-assisted search, document intelligence, citizen/investor Q&A, and administrative support tools.
Data Governance Recommendations	Recommend data classification, ownership, access, privacy, retention, and institutional governance principles.
Digital Public Infrastructure Conceptualization	Support conceptual design for identity, interoperability, payments, documents, and service-delivery layers.

17. Platform IP, Data Ownership and National Control

Afronovation owns, controls, operates, and maintains the platform as proprietary SaaS infrastructure. Afronovation's platform is and will remain Afronovation's intellectual property. This includes the software platform, reusable modules, technical architecture, product frameworks, design systems, implementation methodology, AI-enabled components, and related proprietary tools.

The Government of Zimbabwe, ZIDA, ministries, agencies, and designated public institutions retain ownership and authority over their official data, documents, investment project information, national content, institutional records, and policy materials.

Government institutions may be granted configured access, publishing permissions, review workflows, dashboards, or institutional workspaces based on agreed entitlements. This model allows Zimbabwe to benefit from rapid deployment, lower implementation risk, continuous innovation, and platform scalability while preserving national authority over official data, content, and decisions.

The platform may be deployed under a SaaS licensing, implementation, and support model, with configuration adapted to Zimbabwe's institutional requirements.

18. Proposed Digital Ecosystem

The investment platform can serve as the first visible layer of a broader national digital transformation ecosystem. The broader ecosystem should not be implemented all at once. The recommended approach is to begin with investment intelligence, prove value, and expand into priority digital transformation workstreams through NDAP.

Ecosystem Layer	Purpose
National Interoperability Layer	Enables secure data exchange across government systems.
Digital Identity Concepts	Supports trusted access to services, authentication, and citizen/business verification concepts.
Secure Document Systems	Protects official documents, investment files, permits, and institutional records.
Investment Intelligence Systems	Digitizes investment opportunities, project pipelines, and investor engagement.
eGovernment Service Platforms	Supports online delivery of public services.
ePayment Infrastructure Concepts	Enables secure public payments, fees, permits, taxes, and service transactions.
Tourism Enablement Platforms	Promotes Zimbabwe's destinations, experiences, and tourism investment opportunities.
Embassy & Diaspora Systems	Connects embassies, diaspora communities, and investors to national opportunities.
AI-Enabled Service Infrastructure	Supports guided search, document intelligence, service assistance, and decision support.
Data Governance	Defines how national data is classified, protected, shared, retained, and governed.

19. Proposed 60-90 Day Pilot Scope

To prepare the platform for a formal engagement, Afronovation proposes a 60-90 day pilot that validates the product model, digitizes selected projects, demonstrates governance workflows, and creates a visible platform foundation for decision-making.

Pilot Workstream	Indicative Output
Strategic Discovery	Confirm priority outcomes, stakeholders, governance model, platform scope, and pilot success measures.
Project Data Model	Finalize structured project template, taxonomy, required fields, SDG mapping, ministry mapping, visibility levels, and review workflow.
Project Digitization	Digitize 25-40 selected projects from the ZIDA portfolio, pending validation by the appropriate authority.

Pilot Workstream	Indicative Output
Platform MVP	Launch investor-facing pages, sector explorer, project registry, project detail pages, and strategic alignment views.
Lead Capture & Investor Workflow	Configure registration prompts, inquiry forms, investor interest routing, and contact reason segmentation.
Admin & Super Admin Demonstration	Show project creation, validation, review, approval, publishing, taxonomy management, entitlements, and analytics.
Pilot Report & Scale Roadmap	Prepare recommendations for production deployment, licensing, governance, onboarding, and NDAP expansion.

20. Success Measures

- Investors can understand Zimbabwe's investment opportunity landscape within minutes.
- Projects can be discovered by sector, pillar, SDG, ministry, province, financing type, and readiness level.
- Registered users and qualified investors can be captured as structured leads.
- Every published project has passed a review and approval workflow.
- ZIDA, ministries, and designated stakeholders can see how institutional coordination would work.
- Afronovation's super admin ownership and SaaS control model are clear.
- The platform creates a natural pathway toward a paid production pilot, long-term SaaS licensing model, and broader NDAP engagement.

21. Proposed Next Step and Closing Positioning

Afronovation proposes a strategic discovery session with the Embassy of Zimbabwe in Washington, D.C., ZIDA leadership, the senior government advisor, and relevant institutional focal points.

The objective of the session would be to validate priority outcomes, platform scope, pilot governance, first sectors and projects to digitize, beneficiary ministry mapping, SDG and impact mapping, content ownership, approval workflow, SaaS licensing model, and NDAP expansion pathway.

The immediate deliverable from this discovery phase would be a short pilot implementation plan for the Zimbabwe Digital Investment & Economic Intelligence Platform, including governance design, project data model, implementation roadmap, roles, success measures, and commercial pathway.

Closing positioning statement

Afronovation proposes a partnership model in which Zimbabwe retains full authority over its national content, official data, project information, institutional priorities, and policy decisions, while Afronovation provides the proprietary SaaS platform, implementation expertise, and innovation capability required to transform those assets into a modern digital investment and economic intelligence interface. The platform begins as a governed investment intelligence layer and can evolve through NDAP into a broader national digital acceleration pathway.

22. Contact and Proposed Follow-Up

Afronovation welcomes the opportunity to further discuss the proposed Zimbabwe Digital Investment & Economic Intelligence Platform and the broader National Digital Acceleration Program with the Government of Zimbabwe, ZIDA, the Embassy of Zimbabwe in Washington, D.C., and relevant institutional stakeholders.

Afronovation Contact	Recommended Follow-Up
Afronovation, Inc. Cary, North Carolina, USA www.afronovation.com hello@afroinnovation.com +1 844 664 4247	A focused strategic discovery and MVP activation discussion to validate the platform scope, priority stakeholders, governance model, project data structure, pilot timeline, and pathway toward implementation.

Source Notes

This concept note was prepared using the materials provided by the user and public policy references. Source materials should be validated before external distribution or contract attachment.

Source	Use in Concept Note
ZIDA 2025 Projects portfolio provided by the user	Used to frame the project catalogue modernization opportunity and investment intelligence platform use case.
Afronovation Executive Brief, Stakeholder Booklet, and Business Profile	Used to align Afronovation positioning, solutions, platform ecosystem, delivery methodology, and stakeholder value.
Digital Fast Track reference materials and company profile provided by the user	Used only as a benchmark for government modernization program structure; wording and brand positioning were adapted into Afronovation's own National Digital Acceleration Program.
Zimbabwe Vision 2030 public policy materials	Used to frame the national ambition toward upper-middle-income status by 2030.
Zimbabwe National Development Strategy 2 public policy materials	Used to align with the 2026-2030 development period and Vision 2030 implementation context.
Smart Zimbabwe 2030 Master Plan public policy materials	Used to align with national digital transformation and ICT-enabled development priorities.
ZIDA public investment promotion and investor services materials	Used to align the platform with the investment promotion and investor facilitation mandate.

Important validation note: Any financial indicators, project readiness claims, ministry mappings, official project documents, or investment eligibility details should be validated by ZIDA and relevant authorities before production publication. The platform should treat imported records as draft or pending validation until approved through the governance workflow.
